Networks - Assignment 6

-Surya Sen Dwivedi (15CS10044)
-Nilay Pochhi (15CS10033)

Compilation and Running Procedure

1. Execute make command.
2. Copy client executable in a different directory.
3. Execute ./server <port-number> from one terminal.
4. Execute ./client <localhost> <port-number> from another terminal.

Sample Input and Output

1. First enter the filename to be transferred in the client terminal
2. Next enter the drop probability (to be used by the server).
3. The file transfer will begin and congestion control can be observed.
